

Max Allaire

Business development and ecosystem operator, crypto x AI · max.allaire@gmail.com · linkedin.com/in/max-allaire · github.com/ClawdGltMan · maxallaire.com

I research where crypto and AI meet, then build prototypes with AI tooling to find out whether I'm right, and I update my view from the evidence.

EXPERIENCE

Wormhole Foundation — BD Associate / DeFi Lead Jul 2025 – Mar 2026

Owned DeFi partnerships for a cross-chain messaging protocol: sourced and qualified protocol integrations, structured partnership proposals, and ran the pipeline from first call to live integration. Built the internal lead-generation and CRM tooling the team used to track it.

AgriDex — Partnerships & Growth Manager Aug 2024 – Jun 2025

Partnerships and go-to-market for a Solana-based agricultural commodities settlement platform. Onboarded counterparties, ran growth experiments, and owned the partner pipeline.

Solana Foundation — Business Development Intern May – Aug 2024

Engaged financial institutions on Solana adoption. Structured deal proposals with asset managers and banks. Built a custom GPT for coding Solana applications, an early version of the AI-assisted building I now do full time.

Circle — Marketing Intern Jun – Sep 2020

General Catalyst — Competitive Analysis Intern Mar – Jul 2020

INDEPENDENT RESEARCH & BUILDING

Six months of primary research and prototypes, built by directing AI agents (Claude Code) rather than writing code by hand. Mar – Sep 2026

- **Agentic payments research program** — milestone report (Mar 2026), protocol reference notes, a verification-landscape map, five open questions logged with explicit priors, and a published Field Manual (Sep 2026).
- **x402 verifier prototype** — a third-party x402 facilitator that inserts an LLM-as-judge quality gate before settlement. Four settlements on Base Sepolia (Apr 2026). Stalled honestly; the lessons are written up.
- **Fieldnotes** — an editorial reference site on agentic payments, Solana liquidity and institutional adoption, with a day-gated data refresh and human review flags (Sep 2026).
- **Proof market maker** — an automated market-making bot with inventory management, self-healing reconnects and a two-stage kill switch, plus an operator dashboard, for a paper-trading competition (Jun 2026).
- **Hearth** — a production household-operations platform for a private client: 721 commits, 95 database migrations, 13 scheduled jobs, Slack and Google Workspace integrations (May – Jun 2026).
- **Elo Solutions** — a one-person studio shipping production software for founders using AI-directed development.

LEADERSHIP

Tulane Fintech — President Feb 2023 – May 2025

EDUCATION

Tulane University — B.S., Political Science 2022 – 2025

Brandeis University 2020 – 2021

SKILLS

Business development & partnerships · Go-to-market · Primary research and thesis writing · Deal structuring · AI-assisted product building (Claude Code, agent workflows, Next.js / Supabase / Vercel) · Solana ecosystem, stablecoins, agentic payments, tokenization
